Optimize Your Full-Arch Workflow with Practice Metrix's proven tech, processes, and Digital advantages.

Are you offering full-arch implant solutions— yet still spending too much time managing consultations, coordinating communication, or troubleshooting case logistics?

Empower your team to take ownership of your **entire full-arch workflow** confidently, efficiently, and with precision in this **5-Day Advanced Full-Arch Implant Treatment Coordinator (ITC) Course** by [Practice Metrix](#).

This advanced program transforms your staff into highly skilled full-arch case managers who oversee every phase of the treatment process — from **digital planning** to **final prosthetic delivery** — allowing your clinicians to focus on **surgical excellence** and **superior patient outcomes**. Tying in your key players using the Digital Collaboration playing field called, **My Patient Exchange** so no one gets left behind.

Your Team Will Master How To:

Strategically manage full-arch consultations and case flow across multiple providers and locations.

Deliver comprehensive full-arch consultations — including immediate-load workflows, All-on-X concepts, and hybrid restorative planning.

Gather, organize, and maintain all clinical and administrative documentation for full-arch cases, ensuring complete accuracy and compliance.

Implement a fully integrated digital workflow — mastering the connection between intraoral scans, CBCT data, and virtual prosthetic design. Your team will collaborate with laboratories for precise digital planning and guided surgery, ensuring ideal implant positioning, prosthetic accuracy, and long-term case success.

Communicate complex full-arch treatment details clearly with patients and referring clinicians to ensure understanding, trust, and consistent communication throughout the process.

Prepare and present professional treatment proposals and surgical summaries that strengthen interdisciplinary collaboration and case acceptance.

Understand and confidently explain adjunctive surgical procedures — including sinus lifts, ridge augmentations, and grafting techniques — as they relate to achieving predictable full-arch outcomes. Coordinators will also learn about PRP applications and the differences between resorbable and non-resorbable membranes to communicate accurately with patients and peers.

Present and manage complex financial structures — breaking down multi-phase investments, insurance allocations, and patient co-responsibilities with clarity and professionalism, helping patients feel informed and confident in their investment.

Coordinate seamlessly among surgical, restorative, hygienist, and laboratory teams for fully integrated and predictable full-arch results.

Understand implant systems, multi-unit abutments, and full-arch restorative protocols to support surgical and prosthetic success.

Guide patients through every phase of their transformation — from consultation to delivery and long-term of their full-arch restoration.

Utilize intraoral scanners effectively and train senior surgical assistants to expand your practice's digital capabilities across multiple providers.

Print guided surgery templates in-house using Ray Scan printers, enhancing workflow control and turnaround times.

What This Training Delivers to Your Practice

Greater Clinical Efficiency and Precision:

Your treatment coordinator manages consultations, communication, and case logistics — freeing your surgeons and restorative dentists to focus on clinical mastery.

Higher Case Acceptance and Patient Confidence:

Clear, structured full-arch presentations build trust and help patients commit confidently to their transformation.

Enhanced Team Collaboration:

Digitally integrated workflows eliminate gaps and miscommunication between surgical, restorative, and lab partners.

Scalable Systems for Complex Cases:

Standardized processes ensure precision, consistency, and profitability across every full-arch case and smile reconstruction.

Build a Practice That Runs Like a Fully Integrated Full-Arch System

When your team understands the entire full-arch process — clinically, digitally, and relationally — your patients experience excellence at every stage, and your referring partners recognize your professionalism and precision.

Enroll your staff in the **Advanced Full-Arch Treatment Coordinator Training TODAY** and take your implant practice to the next level of organization, accuracy, and growth.
