Are you placing or restoring implants, yet still spending too much time managing consultations, coordinating communication, or troubleshooting case logistics?

Empower your team to take ownership of the entire implant workflow — confidently, efficiently, and with clinical precision — through this **4-Day Advanced Implant Treatment Coordinator (ITC), Hygienists Course** by [Practice Metrix](#).

Our program transforms your staff into skilled implant case managers who streamline every phase of treatment coordination — from case planning to post-restorative follow-up — enabling you to focus on clinical excellence, increased case acceptance and exceptional patient outcomes.

Your Team Will Master How To:

Strategically manage implant consultations and case flow across multiple providers or locations.

Communicate complex treatment details clearly with both patients and referring clinicians.

Deliver comprehensive consultations for multi-unit and phased implant workflows with advanced case planning.

Prepare and present professional treatment proposals and surgical summaries that increases case acceptance and seamless clinical care team collaboration.

Accurately gather, organize, and maintain all medical, radiographic, and consent documentation.

Confidently educate patients on advanced surgical concepts — including lateral and vertical sinus lifts, ridge augmentations, bone grafting, PRP applications, and membrane distinctions — ensuring patients and partners receive accurate, transparent information.

Implement an advanced, digitally integrated workflow — merging intraoral scans and CBCT data for complex, multi-unit cases. Your team will collaborate with laboratories for precise virtual planning and guided surgical template fabrication, ensuring optimal implant positioning and prosthetic accuracy.

Explain complex financial structures — breaking down multi-phase treatment investments, insurance allocations, and patient co-responsibilities with clarity and confidence.

Coordinate seamlessly among surgical, restorative, and laboratory teams for predictable outcomes.

Confidently guide patients through every stage of the implant journey — from consultation to long-term maintenance..

Understand your practice's implant systems, components, and restorative protocols in full.

Maintain seamless communication across your entire implant referral and support network.

What This Training Delivers to Your Practice

Greater Clinical Efficiency & Precision:

Empowered coordinators manage advanced consultations and logistics — freeing your clinicians to focus on surgical excellence.

Higher Case Acceptance & Patient Trust:

Confident, transparent presentations of multi-phase treatment plans inspire patient confidence and commitment.

Stronger Interdisciplinary Collaboration:

Structured digital workflows eliminate communication gaps between surgical, restorative, and laboratory teams.

Predictable Scalable Systems:

Standardized processes bring consistency, precision, and profitability — even for complex, full-arch rehabilitation cases.

Transform Your Practice To Run With Precision Powered By a Well-Crafted Implant System

When your team understands the implant process from every angle — clinical, administrative, and relational — your patients experience excellence at every touchpoint, and your referring partners recognize your professionalism.

Enroll your team in the **Advanced Implant Treatment Coordinator Training TODAY**. Take your implant Practice to the next level of organization, predictability, patient satisfaction and growth.
