Are you placing or restoring implants — but spending too much time managing consultations, paperwork, and case collaboration?

Let **Practice Metrix** elevate your team to handle it all with confidence through this **2-Day Basic Implant Treatment Coordinator (ITC) Course**.

Our comprehensive program equips your staff with the knowledge, systems, and confidence to manage every step of the implant process — from the first consultation to post-surgical follow-up — so you can focus on what you do best: **delivering exceptional patient care**.

Your Team Will Learn How To:

Manage and prioritize implant consultations efficiently — streamlining scheduling and communication across multiple providers or locations.

Understand, gather organize and manage implants for a successful case — ensuring all clinical, radiographic, and consent documentation is complete and compliant.

Communicate effectively with the entire Implant team, G Lab & Implant Rep — confidently explaining single-phase implant treatment plans and expectations.

Elevate your practice by deploying a Fully Integrated Workflow, CBC Planning & Guided Cases — leveraging intraoral scans and CT data to enhance case precision. Your team will learn how to transmit digital files to the laboratory for accurate case design and fabrication of customized surgical guides, supporting predictable clinical outcomes.

Your Team Will Learn How To:

Understand how to leverage **MPE, CBCT Data** for patients **Digital Planning and precise outcomes** — helping patients understand investment, insurance benefits, and co-responsibilities while addressing cost concerns in a professional, reassuring manner.

Enhance case presentation with **proven approaches to increase case acceptance** — understanding key team members and providing professional treatment summaries and post-surgery updates to strengthen interdisciplinary trust.

Coordinate seamlessly between **surgeons, restorative dentists, hygienists, and laboratories** — ensuring consistent communication and efficient case flow.

Gain a **foundational understanding of implant systems and components** — including parts, restorative protocols, and common clinical terminology.

Guide patients through every step of their **implant journey** — from initial consultation through long-term maintenance, ensuring a seamless, supported experience.

Benefits to Your Practice

Save Chair Time:

Your team manages the details and logistics, freeing you to focus on clinical care.

Boost Case Acceptance:

Confident, organized coordinators create a smooth, patient-centered experience that builds trust and commitment.

Enhance Collaboration:

Eliminate miscommunication between surgical and restorative teams with standardized processes and shared systems.

Increase Efficiency:

Structured workflows reduce errors and increase throughput in every implant case.

Educate and Empower Patients:

Ensure patients fully understand their treatment options, process, and investment.

Deliver a Concierge-Level Experience:

Your ITC becomes the patient's trusted guide through every stage of their implant treatment journey.

Empower your practice to set the digital standard in your community

When your team implements the proven **Practice Metrix** digital workflow processes, along with the **One Surgical Solution**, your patients feels supported, referrals trust your practice and your cases run precisely

Enroll your staff in the Foundational Implant Treatment Coordinator training **TODAY** - watch your implant practice transform.
